

GW Politics Poll 2024 Presidential Election Panel

The survey was fielded June 11-24, 2024 with a sample of 2750 registered voters. This is the first wave of a four-wave panel survey tracking the election.

YouGov recruits individuals in a variety of ways into their panel and then uses sample matching to create a representative sample from this non-randomly selected pool. YouGov interviewed 3848 respondents who were then matched down to a sample of 2750 to produce the final dataset. The respondents were matched to a sampling frame on gender, age, race, and education. The sampling frame is a politically representative "modeled frame" of US adults, based upon the American Community Survey (ACS) public use microdata file, public voter file records, the 2020 Current Population Survey (CPS) Voting and Registration supplements, the 2020 National Election Pool (NEP) exit poll, and the 2020 CES surveys, including demographics and 2020 presidential vote. The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, and region. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles. The weights were then post-stratified on 2020 presidential vote choice as well as a four-way stratification of gender, age (4-categories), race (4-categories), and education (4-categories), to produce the final weight.

The margin of error for the full sample is +/- 2%.
