

GW POLITICS POLL

The survey was fielded June 4-23, 2021. This is the fourth wave of a four wave survey. YouGov fielded the panel survey with a sample of registered voters. YouGov recruits individuals in a variety of ways into their panel and then uses sample matching to create a representative sample from this non-randomly selected pool. YouGov constructed a sampling frame of U.S. Citizens by stratified sampling from the full 2018 American Community Survey. In the first wave survey a total of 2759 respondents were interviewed and then matched to the sampling frame on gender, age, race and education and weighted to the frame using propensity score function that included age, gender, race/ethnicity, years of education and region. This produced a final data sample of 2500. The final wave 4 sample included 1753 registered voters. The partial toplines reported below are based on frequencies using a weight variable provided by Yougov for the sample. The margin of error for the full sample is +/- 2%.
